ENVIRONMENT

DEPARTMENT OF FIRE AND EMERGENCY SERVICES (DFES) CONTEXT

DFES has a legislated role to manage a range of emergencies within Western Australia, including both responding effectively to emergencies and working with the community to increase shared responsibilities related to prevention and mitigation of hazardous risks.

DFES CORE VALUES

- ✦ Teamwork
- ✦ Leadership
- ✦ Trust
- ✦ Commitment

DFES VISION

All Western Australian's working together for a safer state.

FIREFIGHTER ROLE CONTEXT

The Firefighter Success Profile is designed to be sufficiently flexible to be relevant over time. However, should the direction, core business, or business landscape shift considerably, the profile may need to be re-validated.

In this regard, DFES outlines strategic goals of building greater diversity in its workforce, engaging new development pathways for Firefighters, driving innovation and the capacity for change. Consideration for these goals has been incorporated into the profile.

At the time of this profiles inception, the overarching goal of the Firefighter role is to prepare for and respond to emergencies as a team and provide support in community centred emergency management and hazard prevention activities. To achieve this, the following areas of focus are critical for a Firefighter at DFES:

Respond to emergency incidents as a team member to safeguard people, property and the environment.

Though emergency response may incorporate only 10% to 15% of a Firefighters time, their team performance in such extreme circumstances is critical. During such incidents they may operate vehicles and complicated mechanical equipment, safeguard people, property and the environment, liaise with other emergency services, and a range of other duties. Their ability to operate as a team in such situations is of critical importance, and thus having strong relationships with their team members will help facilitate such teamwork.

Engage with the community to educate and prevent emergencies.

On top of responding to emergencies, Firefighters have a key role to play in the community. This role sees Firefighters proactively seeking to educate community members and institutions, in order to increase the community's resilience to emergencies. This may be established through presentations to community groups, audits of emergency readiness, observation or participation in emergency exercises and development of mitigation strategies.

Develop professional and technical skills continuously.

Given the range of emergency situations Firefighters respond to in the community (e.g., fires, vehicle accidents, rescues, and other emergencies), professional development and knowledge of procedures, equipment, and tactics is of high importance for new recruits. New recruits are not expected to have emergency response experience when recruited, and consequently, learning and development is a particularly significant focus in the first 5 years after a Firefighter's recruitment, though this is expected to continue throughout a Firefighter's career.

Cope with extreme physical and mental challenges.

When responding to emergency incidents, Firefighters may be exposed to maximum exertion, extreme temperatures, poor visibility, high noise, limited mobility, heights, confined spaces, and a number of chemical and biological hazards. They are expected to utilise a large array of safety equipment to protect themselves and others in situations risking personal injury. They may also witness trauma in the form of individuals involved in such incidents.

Maintain readiness during periods of low activity.

As only 10% to 15% of a Firefighters time incorporates emergency response, there may be significant periods of non-emergency response related activities. This time may include maintaining fitness levels, participating in response exercises, engaging with the community, maintenance of equipment and vehicles, and other miscellaneous activities.

Drive innovation and adapt to change.

Both DFES and the Firefighter role itself are set to develop and grow in the future. There has and will be continual technological change in order to improve both the effectiveness and safety of Firefighters during emergency response. Further, increased diversity amongst the organisation and Firefighters is anticipated, where Firefighters will more accurately reflect and represent the communities they engage with and safeguard. These changes will require a capability and willingness on behalf of Firefighters to positively cope and adapt to broad process and structural changes.

In addition, DFES seeks to create more career paths for Firefighters, which may provide opportunities for innovation amongst those developing in the organisation in the future.

BEHAVIOUR

Competencies

The competencies below are a cluster of related behaviours and personality traits that are associated with success or failure in the job. The profile acts as a positive guide for selection activities, development and coaching purposes.

	ADAPTS TO THE TEAM
Behavioural Description	<ul style="list-style-type: none"> ✦ Aligns personal style with the character of the team ✦ Relates well to other team members ✦ Balances personal goals with those of the team ✦ Understands the perspectives of others
